BIOSIS Previews®

The World’s Premier Life Sciences Research Database

This is an expansive index to life sciences and biomedical research from journals, meetings, books and patents. The database covers pre-clinical and experimental research, methods and instrumentation, animal studies and more. Includes BIOSIS indexing and enhanced MeSH® disease terms.

Comprehensive Coverage of All Relevant Literature

Provide your researchers with the data they need to prepare research projects, grant proposals and follow trends in the life sciences. BIOSIS Previews combines journal content from Biological Abstracts® with supplemental, non-journal coverage from Biological Abstracts/RRM® (Reports, Reviews, Meetings). Specialized indexing helps researchers discover more accurate, context-sensitive results.

Key Benefits to Researchers

• Uncover relevant results in more fields of life sciences research than any other source in the world
• Explore biomedical meetings, patents and book contents not available in Web of Science™ Core Collection or MEDLINE®.
• Find high-impact articles from peer-reviewed, influential journals
• Discover emerging trends that help you pursue successful research and grant acquisition
• Integrate searching, writing and bibliography creation into one streamlined process

Extensive Backfile Coverage Available for Deep Research

With optional backfiles back to 1926, researchers can track over 80 years of vital data and find the supporting — or refuting — data they need for their research. More extensive backfiles give researchers the power to conduct deeper, more comprehensive searches and track trends through time.
