| Amniocentesis Test for Chromosome Problems: Yes or No? | • Having amniocentesis • Not having amniocentesis                                                | • What is it?  
• Will we know for sure if our baby has Down syndrome or another chromosome problem?  
• Are there risks to the baby?  
• If a problem is found, what does that mean for us?  
• What are women told after the test?  
• Are there other tests? | 0                                                | US and UK                                              | WA State Certified - July 2018 |
| Atrial Fibrillation: Treatment Options to Lower Stroke Risk | • No treatment • Warfarin • Dabigatran • Rivaroxaban • Apixaban • Edoxaban • Aspirin • Left atrial appendage closure | • What does the treatment involve?  
• My risk of stroke due to blood clots?  
• My risk of major bleeding needing treatment?  
• Other risks and side effects?  
• Can blood thinning effect of the drug be reversed?  
• What is the cost? (for US version only) | 2                                                | US and UK                                              | This decision aid meets requirements outlined in the Decision Memo for Percutaneous Left Atrial Appendage (LAA) Closure Therapy by Centers for Medicare and Medicaid Services (CMS). |
| Down Syndrome Screening Test: Yes or No? | • Having screening for Down syndrome • Not screening for Down syndrome | • What is it?  
• How likely are we to get a lower- or higher-chance result?  
• Will we know for sure if our baby has Down syndrome?  
• What if the diagnostic test shows a problem?  
• Are there risks to the pregnancy? | 0                                                | US and UK                                              |                                                                      |
| Enlarged Prostate: Treatment Options for Benign Prostatic Hypertrophy | • Watchful waiting • Lifestyle changes • 5-alpha reductase inhibitors (5-ARIs) • Transurethral resection of the prostate (TURP) • Laser surgery • Transurethral microwave therapy (TUMT; for US version only) | • What does the treatment involve?  
• Will it help my symptoms?  
• Will I pee less often at night?  
• What are the risks of an enlarged prostate?  
• What are the side effects?  
• What are the risks of treatment? | 1                                                | US and UK                                              |                                                                      |
| Failure to Progress in Labor: Delivery Options | • Vaginal delivery • Cesarean section (C-section) | • What does the delivery involve?  
• What are the risks to my baby  
• What are the risks to me?  
• What is the chance that I will still have a C-section?  
• Will I be able to care for my baby?  
• What will my recovery be like? | 0                                                | US and UK                                              |                                                                      |
| Hepatitis C Treatment Now: Yes or No? | • Delay treatment • Treatment with direct-acting antiviral medicines | • What does it involve?  
• Will the infection go away?  
• Will it help my symptoms?  
• What will happen to my liver?  
• What are the side effects of treatment?  
• What are the risks? | 0                                                | US and UK                                              | This decision aid meets requirements outlined in the Centers for Medicare and Medicaid Services (CMS) Quality Payment Program measure for “Hepatitis C: Discussion and Shared Decision Making Surrounding Treatment Options.” |
| Herniated Disk in Lower Back: Treatment Options | • Treatment without surgery • Shots in your back (epidural injections) • Surgery (open surgery) • Minimally invasive surgery | • What does the treatment involve?  
• Will it help my pain?  
• Might I get surgery later?  
• What are the side effects?  
• What are the risks?  
• When will I recover? | 0                                                | US and UK                                              |                                                                      |
| Hip Osteoarthritis: Treatment Options | • Exercise • Physical therapy • Acetaminophen • Oral nonsteroidal anti-inflammatory drugs (NSAIDs) • Oral opioid medicines • Shots in your hip • Hip replacement | • What does the treatment involve?  
• Will it help my pain or activity?  
• How long will it work?  
• What are the side effects?  
• What are the risks?  
• How long until I recover from treatment? | 0                                                | US and UK                                              |                                                                      |
